

no danger of explosion

no energy costs

no extravagant workload

# DALLMER Horseshoe Former

with transmission support DBGM

also available with stand

DALLMER once again is setting new standards with new visions for the beloved farrier's trade. This registered instrument is dedicated to modern shoeing and everybody's own progress. It is easy to handle, reliable, transportable and allows an optimal forming of the manufactured horseshoes to the relevant hoof form and is thus a new spectrum for the male and female farrier in terms of horseshoe forming.

So far the farrier's success has been forged on the fire of exertion by running the risk of burning oneself. Do dare to kick at old doors because behind them there is always a new landscape! The DALLMER Horseshoe Former easily bends irons\* and aluminiums without any heat or gas with utmost precision.

\*currently up to 20 x 8 mm irons!!

## Instructions:

# DALLMER Horseshoe Former DBGM

Pick the appropriate horseshoe according to the hoof size and compare it to the relevant hoof form.

Place one foot onto the stand's longer pedestal.

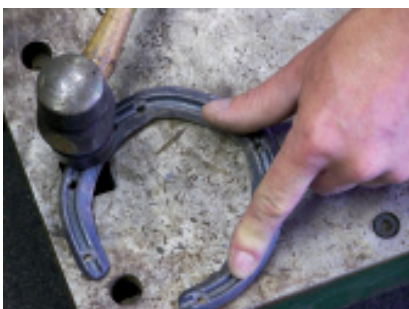

To be able to bend a horseshoe you need to place it between the two bolts that are attached to the revolving disk.

Thus (as shown in the photo) you can widen...

...or narrow the irons.

Finally level the iron on a surface plate. Done!!
